

ROMC TRUST

December 31, 2021

MANAGEMENT REPORT OF FUND PERFORMANCE

For the year ended December 31, 2021

This annual management report of fund performance contains financial highlights but does not contain the complete financial statements of ROMC Trust (the Fund). You can get a copy of the interim or annual financial statements at your request, and at no cost, by calling 1-866-261-6669, by writing to McLean Asset Management Ltd., 1 Richmond Street West, Suite 701, Toronto, Ontario M5H 3W4 or by visiting www.mamgmt.com or SEDAR at www.sedar.com.

Unitholders may also contact us using one of these methods to request a copy of the Fund's proxy voting policies and procedures, proxy voting disclosure record, or quarterly portfolio disclosure.

About ROMC Trust

The Fund is a Canadian reporting issuer unit trust founded in 2016.

ROMC's goal is to generate a positive return on investor capital, principally through ownership in common equity investments. ROMC's manager believes that a good business generates a high economic return on its own capital. A good investment results from acquiring an interest in a good business at a sensible price, thereby producing an attractive economic return on investor capital. Economic returns typically take the form of earnings, dividends and interest income but can also derive from rising asset values.

ROMC's manager encourages unitholders to focus on economic results, believing that attractive economic returns lead to positive market returns, which help investors maintain their purchasing power over time. Given the detrimental effects of long-term inflation and taxes, maintaining purchasing power is easier said than done. The great fund manager John Templeton said, "For all long-term investors, there is only one objective: maximum total real return after taxes." This truism lies at the heart of what ROMC does.

ROMC has concentrated positions. ROMC's fiscal year follows the calendar year. Valuations are currently performed daily (on each business day). Unitholders are entitled to receive an annual management report of fund performance, together with annual audited financial statements, as well as an interim management report of fund performance, together with interim financial statements.

Investors have the right to cancel a subscription, have their money returned and/or claim damages if information provided to them by management misrepresents facts about ROMC. More details about investor rights can be found in the Ontario Securities Act, under section 130.1(1).

To the Owners of ROMC Trust:

For calendar 2021, ROMC Trust produced an operating profit of \$3,059,973. On a per-unit percentage basis, our gain was 28.27 per cent for series A and 28.99 per cent for series F. Since inception (over five years ago), our per-unit net asset value, including distributions, has increased from \$10 to \$18.62 for series A and to \$19.22 for series F, an average annual compound growth rate of 11.78 per cent and 12.41 per cent, respectively.

Economic progress

The following table shows you how different asset class yields looked recently and over the last couple of years (for S&P 500 Index, 2021 earnings are preliminary). When looking at the table, keep in mind that at present, inflation is running at an annualized five per cent. Given that, none of the yields below currently offer purchasing power protection, especially after taxes. Unless inflation returns to a more normalized two per cent, one would expect yields to correct upward, requiring asset values to decline. By comparison, ROMC's portfolio holdings had a 2021 weighted-average earnings yield of more than 11 per cent.

<u>Asset class relative yields</u>	<u>2021</u>	<u>2020</u>	<u>2019</u>
S&P 500 Index earnings yield *	4.2%	2.5%	4.3%
10-year treasury bond yield to maturity **	1.9%	0.7%	1.9%
3-mth treasury bill **	0.4%	0.1%	1.6%

* Source: www.us.spindices.com

** Source: www.bankofcanada.ca

Expenses

Last year, ROMC's management expense ratio (MER) was 2.30 per cent for series A and 1.74 per cent for series F (up from 2.15 per cent and 1.58 per cent, respectively in 2020). The MER is calculated using the Fund's operating expenses. It is determined by adding up all relevant expenses charged against the Fund and dividing them by the Fund's average daily net assets over the same period.

Taxes

For taxable owners, T3 slips show a per-unit distribution for last year in the amount of \$0.83 for series A and \$0.93 for series F. Since inception, more than five-and-a-half years ago, we've only had two distributions, worth about eight per cent of year-end market value. By comparison, at year end, the fund's per-unit net asset value, including the distributions, was about 90 per cent higher than at our start.

Partnership

A glance at our historical performance chart on pages 9 & 10 suggests that in investing, as in life, there are no straight lines. But does that mean risk? Textbooks suggest that is the case. I offer a different perspective, summed up as follows: "I'll take a lumpy 15 per cent over a smooth 7 any day." When it comes to gyrating prices, known as volatility, you should find them opportunistically useful. Risk, on the other hand, is properly defined as the permanent loss of capital. We may not like the anxiety caused by temporary swings in our market value but to suggest that they are permanent and therefore risky, is silly. As your managing partner in ROMC, my job is to help you see the difference and, in that spirit, I offer a rousing pep talk by ever-ebullient Charlie Munger:

"This is the third time that Warren (Buffett) and I have seen our holdings in Berkshire Hathaway go down, top tick to bottom tick, by 50%. In fact, you can argue that if you're not willing to react with equanimity to a market price decline of 50% two or three times a century, you're not fit to be a common shareholder, and you deserve the mediocre result you're going to get."

Feel the tingle?

March 24, 2022

David McLean

Management Discussion of Fund Performance

Investment objectives & Strategies

To achieve ROMC Trust's objectives, your manager selects securities that offer a perceived discount to value found generally in securities markets. The belief is that a good investment is generally determined by acquiring a productive asset that generates an attractive economic return on investor capital. It involves an analysis of the strengths of individual issuers, with much less emphasis on short-term market factors. Greater importance is placed upon an assessment of an issuer's financial strength as well as current and future earnings power. The strategy follows disciplines regarding price paid to acquire portfolio investments. The level of investment in an issuer's securities is generally commensurate with the price of the issuer's securities in relation to its intrinsic value. The approach is designed to provide a margin of safety, which in turn serves to reduce overall portfolio risk. Economic returns typically take the form of earnings, dividends and interest income but can also derive from rising asset values. ROMC Trust will tend to hold only a handful securities at one time. There are few moments when most securities are available at perceived discounts, even when looking globally. As a result, the Fund will tend to concentrate positions.

Risk

At year end, ROMC held 11 per cent of the portfolio in cash. As we compare ourselves to a cashless index, any amount of cash on ROMC's balance sheet will act as a drag on relative performance in a rising market environment. ROMC's focus is less on the level of cash held in the portfolio than on value for money in investment opportunities and any lack of perceived value will likely see us with cash. ROMC will do little to chase the market and that may mean periods of underperformance.

Risks involved with an investment fund with a global mandate like ROMC include: securities market risk, foreign-currency risk, security-issuer risk, political & legal risk, broker/dealer risk, tax risk, net asset value fluctuation, limited operating history, key personnel risk, multi-class risk, no guaranteed return, loss of limited liability, and a reliance on historical data risk. It's a good idea for all investors, whether existing or prospective, to read the fund's most recent prospectus and consider the fund's risks.

Results of operations

Last year, series A units and series F units of the Fund—including the year-end distribution—showed an increase of 28.27 per cent and 28.99 per cent, respectively. As we realized capital gains over the year, there was a per-unit distribution to unitholders of \$0.83 to series A and \$0.93 to series F. By comparison, the MSCI World Equity Index (in Canadian dollars) returned 21.31 per cent on a gross basis.

Last year, we earned \$3,059,973 in comprehensive income (including unrealized gains of \$2,019,058). Operating expenses were \$308,551. Because most of our income was in the form of realized gains, there was a distribution to unitholders in the period.

At year end, we held 11 common stock investments, spread out globally over five industry groups. Over the period since I last reported to you, changes made to the portfolio were as follows: (i) a decrease in cash; (ii) a net increase in financials through further investment in insurance, particularly in Canada; and (iii) an increase in a diversified holding company in India. At year end, ROMC had the following allocations:

ROMC Trust asset mix as at:	31-Dec-21	% Fund net assets
Canadian equities		26%
US equities		31%
European equities		11%
International equities		21%
Cash & equivalents		11%
Total - ROMC Trust		100%

ROMC Trust Sector allocation at 31-Dec-21

Recent developments

Last year, we enjoyed modest positive net flows into the fund from new and existing owners. We managed to put that new capital to work during the year at what your manager believed was in undervalued investment opportunities, especially in the insurance industry. At time of investment, we observed discounts of 40 per cent on what turned out to be understated net asset values. By year end, those net assets had risen and the market price discount to those values had narrowed to less than 30 per cent. There is still value to be had. In addition to insurance, we increased our holdings in emerging markets, specifically in India. Again, ROMC witnessed a large market price discount to accounting value. At present, that discount has narrowed only slightly and so we remain aggressive acquirers of shares.

For the inquisitive unitholder, you can keep up with goings on at ROMC by viewing our fund's portfolio holdings—updated quarterly at www.mamgmt.com, by clicking on “ROMC Trust” and then on “Reporting.” Also, while you are there, you can find the most recent report from the Independent Review Committee and other reporting details that might help you better understand your fund.

Related party transactions

McLean Asset Management Ltd. (the manager) is a related party and provides or arranges for the provision of all general management and administrative services rendered by ROMC Trust (the fund) in its day-to-day operations, including providing investment advice and arranging for the provision of record-keeping services for the fund. The manager also acts as trustee to the fund.

In providing or arranging for the provision of investment advisory and management services, the manager is entitled to receive an investment management fee from investors in the Fund. Management fees are expensed against the net assets of the fund on each valuation day and paid out monthly or quarterly, at the option of the manager.

ROMC's manager is a unitholder and all transactions between the manager (and any parties related to the manager) with the Fund are done on an arm's length basis, on the same terms as any unitholder.

Financial Highlights

The following tables show selected financial data for ROMC Trust that is intended to help you understand your fund's financial performance. This information is derived from the Fund's audited annual and unaudited interim financial statements.

ROMC Trust net assets per unit - series A	2021	2020	2019	2018	2017	2016*

Closing market price	17.59	14.35	15.28	11.41	11.99	11.13

* From June 3, 2016 to December 31, 2016

- (1) Net asset value distributions are based on the actual number of units outstanding at the relevant time. The increase (decrease) from operations is based on the weighted average number of units outstanding over the financial period. Differences between the two methods of calculation can create inconsistent results, as happened in 2016. If I were you, I would focus on the net asset value of ROMC because that is what you pay when you buy or receive if you were to sell.
- (2) Distributions were reinvested in additional units.
- (3) This information is provided as at period end shown and is rounded to the nearest thousand.
- (4) Management expense ratio (MER) is based on total expenses for the stated period and is expressed as an annualized percentage of daily average net assets during the period.
- (5) The Fund's portfolio turnover rate indicates how actively the Fund's portfolio adviser manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all the securities in its portfolio once in the course of the year. The higher a fund's portfolio turnover rate in a year, the greater the trading costs payable by the fund in the year and the greater the chance of an investor receiving taxable capital gains in the year. There is not necessarily a relationship between a high turnover rate and the performance of the fund.
- (6) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net assets during the period.

Management fees

In consideration for the provision of management services to ROMC, McLean Asset Management Ltd. (the manager) receives a management fee at the annual rate of 1 per cent, plus applicable sales taxes, of the net asset value of the Fund's series F units and 1.5 per cent, plus applicable sales taxes, of the net asset value of the Fund's series A units, calculated and accrued daily and payable monthly or quarterly in arrears.

The manager will pay to registered dealers a service fee equal to 0.5 per cent per year of the net asset value of the series A units held by clients of the registered dealer. No service fees are paid to registered dealers in respect of the series F units.

For 2021, management fees for both series were \$217,507 of which \$62,758 was paid to registered dealers.

Past performance

Commissions, trailing commissions, management fees and expenses all may be associated with an investment in the Fund. Please read the prospectus before investing. The indicated rates of return are the historical total returns including changes in unit value and reinvestment of all distributions (if any), and do not take into account sales, redemptions, distributions or optional charges or income taxes payable by any investor that would have reduced returns. An investment in the Fund is not guaranteed. Its value changes frequently and past performance may not be repeated. The Fund's performance numbers assume that all distributions are reinvested in additional units of the Fund. If you hold the Fund outside of a registered plan, income and capital gains distributions that are paid to you increase your income for tax purposes whether paid to you in cash or reinvested in additional units. The amount of the reinvested taxable distributions is added to the adjusted cost base of the units that you own. This would decrease your capital gain or increase your capital loss when you later redeem from the Fund, thereby ensuring that you are not taxed on this amount again. Please consult your tax advisor regarding your personal tax situation.

Year-by-year returns

The following charts show the Fund's performance for each of the series A and series F units for each of the years shown. The charts show, in percentage terms, how much an investment made on the first day of the financial year would have grown or decreased by the last day of the financial year, or period under review.

Annual compound returns

The following table compares the Fund's annual compounded total return for each series of the Fund along with a comparable market index. The MSCI World Index is a broad global equity benchmark that represents large and mid-cap equity performance across developed-market countries. The table is used only to illustrate the effects of the compound growth rate and is not intended to reflect future values of the Fund or future returns on investments in the Fund.

Over the past year, ROMC Trust overperformed the MSCI World Index (in Canadian dollars). The reason had mostly to do with outperformance of value versus growth investment methodologies. Our asset allocation favours financials and they outperformed materially last year.

Since inception, ROMC Trust series A and series F have both underperformed the MSCI World Index but the gap has closed materially of late.

To December 31, 2021	Past year	Past 3 years	Past 5 years	Since inception *
ROMC Trust series A	28.27%	18.33%	10.91%	11.78%
ROMC Trust series F	28.99%	19.00%	11.54%	12.41%
MSCI World Index (CAD)	21.31%	19.17%	14.26%	13.13%

* Inception June 3, 2016
